

For Immediate Release: Glass Technology International Communication Advancements

Glass Technology is proud to announce the integration of a new communication technology. As of March 2009, Glass Technology has incorporated a web-based communication software to power the international demands needed for rural and urban international and domestic communication.

This development will meet Glass Technology's growing demands, providing video and phone conferencing that allows for a dynamic change in the way Glass Technology will communicate. This advancement will allow Glass Technology to effectively communicate on a global level. International clients will be able to use this service free of charge.

"This innovation is allowing Glass Technology to not only speak and communicate with domestic and international clients very easily, but it's also allowing for the enhancement of customer service and training through the use of video conferencing. With this advancement we will be more effective in our communications efforts abroad, further enhancing the quality of windshield repair." Rory Most – General Manager
