

GGG Sensor Tack GGS 901 GEL

**Gold Glass Group introduces
the smart alternative for gel filled sensors**

It is now possible to re-use the round type rain / light optical sensor lenses that are filled with a gel. Our SensorTack repair set is the revolutionary product to re-attach these kinds of sensors to the windshield.

Bohemia, NY-- May 13, 2008 – With Gold Glass Groups newly developed two component silicone gel most round type rain and light sensors, large and small, can be reused avoiding expensive replacement costs. These include the DW01659 as well as many other current models. Applied easily and quickly through a special mixing syringe, the old sensor can be reattached to the windshield using GGG's SensorTack refill gel after only a few minutes.

Mark Daniels of Gold Glass states we have developed a system that is inexpensive and easy to use. GGG's SensorTack refill gel has a short curing time so it can be used in shop or on mobile applications. When using in colder temperatures a heater box is available to reduce curing times. The heating box also has a built-in level indicator and fully adjustable feet.

Contact your local distributor for an application flyer or visit our SensorTack site info page: <http://www.gggcorp.com/sensortack.htm>

Gold Glass Group's mission is to supply high quality products to every segment of the Automotive Glass Market. Whether it is GGG brand Part Specific Mouldings or Universal Mouldings supplied to the ARG market, or a full range of products supplied to windshield manufacturers, quality is always our focus. GGG also supplies a wide range of tapes, foam cores butyl, rain/light sensors, clips, and tools all designed to assist the auto glass professional.
