

Mainstreet Releases Check Processing Module

Mainstreet Computers, the glass industry's leading Point of Sale and Accounting software provider, is excited to announce the release of their electronic check processing module. "This is yet another tool to help glass shops compete more effectively in today's arduous market", said David Carnahan, President of Mainstreet. "Our focus has always been to provide an integration of business solutions that drive companies toward success!"

There are many valuable benefits from using electronic check processing. Businesses eliminate the need for daily trips to the bank and save on the per item deposit fees. NSF risks are reduced due to quicker notification cycles, and deposits are credited for same day availability. These benefits and more work to lower overall operational cost and increase profitability.

How does it work? Paper checks are scanned and the image is automatically routed for deposit through the P.O.S or Accounts Receivable program. The deposit process and record keeping is therefore, simplified and expedited.

Check processing is a powerful addition to the already comprehensive Glas-Avenue software. To further business success, Mainstreet Web Services provide a strong internet presence for customers through custom built web design and optimization.

For more information about check processing and other services available through Mainstreet, visit their website at www.mainstreetcomp.com or call 800-698-6246.
