STAR-LEG FLEXOR

NEW REVOLUTIONARY WINDSHIELD REPAIR TOOL

A new revolutionary windshield repair tool changes the way windshield repair has filled the legs of stars and other stone breaks for over thirty years. An unfilled or incompletely filled leg (crack) of a stone break is the #1 windshield repair error and the #1 cause of a windshield repair failure. Filling those stubborn legs is the most frustrating and dreaded task of a windshield repair. Many technicians will try anything to prevent having to manually flex legs such as increasing the pressure on the resin which will often end up flowering and ruining the appearance of the repair or using very low viscosity resin. The necessary task of completely filling every leg has now been made easy with the new stainless steel Star-Leg Flexor (patent pending). After using it once you will never want to do a windshield repair without it. The manual, time consuming and painful flexing of star-legs with a hand held probe is now obsolete.

The New Star-Leg Flexor:

- Flexes open the legs of stars easily;
- Holds the pressure till it fills;
- Completely fills legs to the tip in seconds;
- Eliminates having to drill legs;
- Saves \$ drill bits;
- Cuts repair time in half;
- Repairs stars the diameter of a tennis ball;
- Connects legs to the breaks bullseye;
- Allows higher viscosity resin

<p>to be used;</p> <ul style="list-style-type: none">• Prevents flowering and;• Can be easily moved around the break.
