### **ULTRAWIZ® TOOLS BY A.N. DESIGNS INC. LAUNCHES REDESIGNED WEBSITE TO SHOWCASE NEW CUTTING BLADES IN ITS PRODUCT LINE**

TORRINGTON, CT: **UltraWiz® Tools** the leading manufacturer of auto glass removal tools announced today the launch of its redesigned website at [www.ultrawiztools.com](http://www.ultrawiztools.com)

The redesigned website offers updated information about its new blades in a user friendly format with easy to print spec sheets.

The redesigned website focuses on improving the visitor experience and introducing detailed, technical information in a visually engaging and easily navigable format. The new landing page makes it easy to locate a specific blade or knife and see up close pictures and graphics. For example the new Reverse Bend Blades have been detailed. These blades are being used to cut away from the glass so as not to get caught in a molding. The New Serrated Blades have also been included. These blades pre-pierce the urethane and allow the main cutting edge to cut. The serration design allows for an approved cutting fluid to make its way to the cutting edge and lubricate the cut making it easier to cut through the urethane.

Visitors will be able to contact us, find product links and find distributors in their area with a zip-code locator.

UltraWiz® Tools have been providing innovative ideas for the auto glass replacement technician since 1986 and is recognized around the world as the blades that permanently changed the industry.
