EQUALIZER® TO LAUNCH INDUSTRY FIRST 20 VOLT "CAMOUFLAGE" POWER TOOL

ROUND ROCK, TEXAS: Equalizer®, the world leader in auto glass removal and replacement technology, announced today that it will launch its all-new, cordless powered auto glass removal tool, the Equalizer® Ambush™ at Auto Glass Week 2012 in Louisville, Kentucky.

This new powerful tool, features a 20 volt, lithium-ion battery that slides securely into the tool. The Ambush™ has a smaller frame than other powered removal tools so that you can get into those tight spaces and work around a-pillars, dashes and rooflines easier. The Ambush™ also comes standard with Equalizer® Hydroblade™ technology that hold water onto the surface of the blade to reduce drag while cutting, making cutting through tough urethane much easier than ever.

Equalizer® is also very excited to have designed this powerful new tool in popular camouflage design. "Not only is this tool a powerful new addition to the Equalizer® lineup but it is sure to excite auto glass technicians who love the outdoors and have all their favorite gear in camo." says Gilbert Gutierrez, Vice President of Sales.

Equalizer® has invented, developed or brought to market the majority of new products that have been introduced into the Auto Glass industry since 1987.

Equalizer® currently provides over 1200 auto glass removal and replacement products worldwide from its headquarters in Round Rock, Texas • USA.
