

Glass Technology developing PRISM² Technology

October 9, 2007

Glass Technology is proud to announce that it is in the late stages of developing a second generation PRISM injector that incorporates a "Dry Vacuum". Based on Glass Technology's Patent Pending PRISM technology this new injector will utilize a more advance "Dry Vacuum" technology, which will result in an even more efficient and simplified repair process. This new injector with PRISM² technology will be more streamlined enhancing the usability and ease of operation for the windshield repair technician.
