

Glass Technology is proud to announce their attendance at the last Greenbuild conference in conjunction with the NWRA. The Greenbuild International Conference and Expo has taken a proactive role in improving environmental practices by promoting “Revolutionary Green: Innovations for Global Sustainability.” The U.S Green Building Council has been the guiding force in developing this annual conference which marked their 15th year anniversary.

Glass Technology has been providing green solutions for over 24 years through the manufacturing of premium windshield repair and glass restoration products, including glass scratch removal solutions to manufacturers, distributors, and builders/installers of glass materials. Glass Technology solutions have continued to promote the reduction of wasted glass materials through their highly advanced glass repair systems. This has resulted in the reduction of operating costs for businesses while simultaneously increasing distribution channel efficiencies--and most importantly--reducing the carbon footprint of hundreds of glass companies.

“This last week has been a tremendous opportunity for Glass Technology and the NWRA to educate and create awareness for builders, architects and consumers about the green solutions available to the auto and flat glass industries.” (Kerry Wanstrath – President)

Details:

Glass Technology has specialized in manufacturing premium windshield repair and glass restoration equipment for 24 years. Based out of Durango, Colorado, Glass Technology has offered top industry training and support to both the auto glass and architectural glass industries. Glass Technology’s distribution network spans over 45 countries, providing the most advanced industry technology and service available.
