

For Immediate Release:

## Glass Technology Inc. Provides Green Alternatives for Mass Transit in the United States

Over the course of 2008, Glass Technology (a manufacturer of premium windshield repair and glass restoration equipment) has provided key solutions to the bus and coach transit authorities across the United States. The Metropolitan Atlanta Rapid Transit Authority (MARTA), providing transportation for over 4 billion passenger trips since the start of its combined bus, rail and paratransit service, has taken a proactive approach in serving their fleet glass needs through the use of Glass Technology glass restoration systems and services. Glass Technology's [Scratch Hog™](#) glass restoration equipment and training program has assisted MARTA in cost effectively correcting damage to the glass in its rail cars.

“Glass Technology is pleased to see this change has allowed MARTA to reduce cost and become a leading model for mass transit authorities across the world by providing green cost saving alternatives to glass replacement and reducing their carbon footprint. These solutions, no matter how large or small, all play a role for businesses to run more efficiently and effectively while having a positive effect on future sustainability.” Rory Most – General Manager of Glass Technology

Details:

Glass Technology has specialized in manufacturing premium windshield repair and glass restoration equipment for 24 years. Based out of Durango, Colorado; Glass Technology has offered top industry training and support to both the auto glass and architectural glass industries. Glass Technology's distribution network spans over 45 countries, providing the most advanced industry technology and service available.
