GLASWELD RELEASES ECONOMICAL WINDSHIELD REPAIR SYSTEM

The ecoVac™ offers efficient, eco-friendly windshield repair at a price to fit any budget.

19 April 2010 – Bend, OR - GlasWeld, a complete solutions provider for the glass repair industry, announces its newest offering in windshield repair equipment, the ecoVac™ injector.

GlasWeld's newest innovation, the ecoVac, brings the best in windshield repair technology and equipment to the masses at an economical price point. The new injector was built based on the proven performance of the company's patented ProVac™ technology and then refined even further to support the company's environmental and efficiency initiatives.

"We've worked hard to offer the windshield repair industry the top-of-the-line quality they've come to expect from GlasWeld at an affordable price," stated Dennis Garbutt, GlasWeld's General Manager. "We've adjusted our pricing to reflect the challenges that our customers are facing out there in the market, while continuing to offer solid, quality products and top-notch customer service and support."

"GlasWeld is Dedicated to Preservation™ and the ecoVac offers our customers an economical way to support this initiative and to help reduce glass waste by keeping windshields out of our landfills and saving energy," continued Garbutt. In fact, the energy needed to produce one windshield is equal to 10,000 repairs.

The new ecoVac injector was designed for efficiency with less waste in production and fewer moving parts, improving ease of use and longevity of life. The injector comes with a lifetime warranty and is available in black anodized aluminum with all operating surface areas finished in stainless steel or a completely stainless steel version. The ecoVac is competitively priced at \$895 for an entry-level system.

The ecoVac achieves the maximum vacuum possible – 28 inches at sea level – and uses less resin than competitive products at only 4 drops per repair! And the addition of a fully threaded piston allows for smooth pressure and vacuum cycles giving users the ability to provide excellent repairs, time after time. The ecoVac also integrates seamlessly with the company's complete selection of accessories and supplies making it easy to adjust as business needs change.

Every ecoVac Windshield Repair System comes with FREE basic online training, professional technical support, industry leading customer service, and a lifetime injector warranty.

For more information about the new ecoVac injector, visit www.glasweld.com/ecovac.
