GLASWELD INTRODUCES PROFESSIONAL HEADLIGHT RESTORATION SYSTEM

Proprietary OEM UV coating and curing process restores headlight clarity quickly and easily.

21 April 2011 (Bend, OR) – GlasWeld, a complete solutions provider for the [glass repair](#) industry, announces the release of its new Gclear™ Headlight Restoration System.

The Gclear Headlight Restoration System has been in development and testing for the past eighteen months and features an original equipment manufacturer (OEM) coating and ultra violet (UV) curing process that restores headlights to their original clarity quickly and easily. The company's proprietary UV coating has been developed with a respected automotive OEM supplier, and, when used with GlasWeld's innovative frequency-tuned UV curing lamp provides a hard, durable, long-lasting finish that exceeds OEM standards.

The [Gclear Headlight Restoration System](#) features a simple, three-step restoration process: Clear, Coat, and Cure. The first step completely removes the oxidized coating from the headlamp to clean and prepare the surface. The second step is applying the aerosol OEM UV coating with a sweeping motion across the headlight. The third step is to cure the headlight with the frequency-tuned UV curing lamp for a complete, flawless coating.

"GlasWeld's entry into the headlight restoration market just makes sense. Our goal is to continually develop and offer products to our customers that can enhance their businesses," stated general manager Dennis Garbutt. "Our entire team has worked very hard to assure we provide top notch components, a systematic and easy process and an absolutely quality result,

all at price points that make sense for the technician and the consumer. We are very proud of the Gclear product line and from initial customer feedback, it looks like we have created a winner.”

The Gclear Headlight Restoration System is available in a variety of configurations and price ranges depending on equipment needs. The Gclear System is available as a manual preparation kit or as a complete professional grade system with orbital sander and UV curing lamp.

Technicians who already have their own equipment may purchase just the proprietary UV coating and UV curing lamp components. System options range from \$395 to \$995 and include online and DVD training.

For more information about GlasWeld’s Gclear Headlight Restoration product line, visit www.glasweld.com/gclear or call 800-321-2597.
