Mainstreet Provides Robust Point Of Sale for Flat Glass

Mainstreet Computers Inc. in Belleville, Mich., launched its Glas-Avenue 8.0 software system containing over 130 new features – many specific to Flat Glass Point of Sale. The advanced design and development of 8.0 provides important features such as Mail-merge printing with Word documents – created, edited, and customized with Glas-Avenue, quick link to MapQuest for job location, and automatic surcharge for transportation or fuel charges to name a few.

A full integration to Mainstreet's Glas-Avenue Accounting allows complete access to an Accounts Receivable Collection System, along with Payroll Services. New credit card authorization is included to simplify processing and ensure accuracy. Companies can also enter bills and make payments by Check, EFT, & Credit Card.

The redesign of Glas-Avenue 8.0 has made this software more robust than ever, yet easier to use with changes implemented based on input from the industry. Flat Glass enhancements include a simplified parts search, introduction of a Progress Billing feature, and the ability to print item labels. Over 40 new shapes were added along with the ability to assign any shape to glass. Additional dimensions to inventory transactions (Purchase Orders, Receipt, and Transfer) were also added.
