USGLASS MAGAZINE TO LAUNCH SOLAR GLAZING SECTION

USGlass Magazine will launch an extensive solar glazing section beginning in its January 2009 issue. The section will publish news, information and stories about the burgeoning solar glazing market and its interface with the glass industry.

“Solar energy initiatives are an important part of the glass industry’s future,” says **USGlass** magazine publisher Debra Levy. “Our readers will need information on everything from manufacturing to installation.”

Levy says the new section will include news and technology, information and products and will be incorporated within the pages of **USGlass**. “There are a lot of sources of information about solar energy,” she says, “but we will be concentrating specifically on the solar-glass interface.”

USGlass magazine is the largest and most-widely circulated architectural glass magazine in the world. It is the only United States-based magazine devoted exclusively to the architectural glass industry. For more information, visit <http://www.usglassmag.com>. The magazine is published by Key Communications Inc.
